Research areas

1. Values, attitudes, norms, and (reasoned) action models

2. Personal/cultural values and attitudes toward ...
   2.1. ... Age
   2.2. ... Crime and deviance
   2.3. ... Gender roles
   2.4. ... Health related behaviors
   2.5. ... Immigration

3. Deviant and delinquent behavior:
   3.1. Peer group and situational influences on deviant and delinquent attitudes and behavior
   3.2. Developmental processes of deviant and delinquent behavior
   3.3. Economic morality and everyday crimes
   3.4. Social and economic crisis, trust, and peoples’ attitudes toward deviant behavior

4. Methods and statistics:
   4.1. Assessing and explaining the comparability of social science measurements in cross-national and longitudinal surveys
      4.1.1. Bayesian methods and approximate measurement invariance
      4.1.2. Alignment optimization
      4.1.3. Multilevel structural equation modeling
   4.2. Panel analysis with fixed effects, structural equation, latent growth, and growth mixture models
   4.3. Count and rare event data analysis
      4.3.1. Self-reported behavioral data
      4.3.2. Excess zeros in latent growth curve and growth mixture models
